Contents

`petlx` is a collection of extensions to `petl`, a Python package for extracting, transforming and loading tables of data.

- Documentation: <http://petlx.readthedocs.org/>
- Source Code: <https://github.com/alimanfoo/petlx>
- Download: <http://pypi.python.org/pypi/petlx>
- Mailing List: <http://groups.google.com/group/python-etl>

For an overview of all functions in the package, see the *genindex*.

Installation

This module is available from the [Python Package Index](#). On Linux distributions you should be able to do `easy_install petlx` or `pip install petlx`. On Windows or Mac you can download manually, extract and run `python setup.py install`.

Note that each submodule within the `petlx` package has dependencies on one or more third party modules which will need to be installed separately.

Modules

2.1 Excel (openpyxl)

```
petlx.xlsx.fromxlsx(filename, sheetname)
```

Extract a table from a sheet in an Excel (.xlsx) file.

N.B., the sheet name is case sensitive, so watch out for, e.g., ‘Sheet1’.

The package `openpyxl` is required. Instructions for installation can be found at <https://bitbucket.org/ericgazoni/openpyxl/wiki/Home> or try `pip install openpyxl`.

2.2 SQL (SQLAlchemy)

Extension module providing some convenience functions for working with SQL databases. SQLAlchemy is required, try `apt-get install python-sqlalchemy` or `pip install SQLAlchemy`.

Acknowledgments: much of the code of this module is based on the `cvsq` utility in the `csvkit` package.

```
petlx.sql.todb(table, dbo, tablename, schema=None, commit=True, create=False, drop=False, constraints=True, metadata=None, dialect=None, sample=1000)
```

Drop-in replacement for `petl.todb()` which also supports automatic table creation.

2.3 Arrays (numpy)

`petlx.array.toarray`(*table*, *dtype=None*, *count=-1*, *sample=1000*)
Convenience function to load data from the given *table* into a numpy structured array. E.g.:

```
>>> from petl import look
>>> from petlx.array import toarray
>>> look(table)
+-----+-----+-----+
| 'foo' | 'bar' | 'baz' |
+=====+=====+=====+
| 'apples' | 1 | 2.5 |
+-----+-----+-----+
| 'oranges' | 3 | 4.4 |
+-----+-----+-----+
| 'pears' | 7 | 0.1 |
+-----+-----+-----+

>>> a = toarray(table)
>>> a
array([('apples', 1, 2.5), ('oranges', 3, 4.4), ('pears', 7, 0.1)],
      dtype=[('foo', '|S7'), ('bar', '<i8'), ('baz', '<f8')])
>>> a['foo']
array(['apples', 'oranges', 'pears'],
      dtype='|S7')
>>> a['bar']
array([1, 3, 7])
>>> a['baz']
array([ 2.5,  4.4,  0.1])
>>> a['foo'][0]
'apples'
>>> a['bar'][1]
3
>>> a['baz'][2]
0.10000000000000001
```

If no datatype is specified, *sample* rows will be examined to infer an appropriate datatype for each field.

The datatype can be specified as a string, e.g.:

```
>>> a = toarray(table, dtype='a4, i2, f4')
>>> a
array([('appl', 1, 2.5), ('oran', 3, 4.400000095367432),
       ('pear', 7, 0.10000000149011612)],
      dtype=[('foo', '|S4'), ('bar', '<i2'), ('baz', '<f4')])
```

The datatype can also be partially specified, in which case datatypes will be inferred for other fields, e.g.:

```
>>> a = toarray(table, dtype={'foo': 'a4'})
>>> a
array([('appl', 1, 2.5), ('oran', 3, 4.4), ('pear', 7, 0.1)],
      dtype=[('foo', '|S4'), ('bar', '<i8'), ('baz', '<f8')])
```

`petlx.array.torecarray(*args, **kwargs)`
Convenient shorthand for `toarray(...).view(np.recarray)`.

New in version 0.5.1.

`petlx.array.fromarray(a)`
Extract a table from a numpy structured array.

New in version 0.4.

2.4 DataFrames (pandas)

The package pandas is required. Instructions for installation can be found at <http://pandas.pydata.org/pandas-docs/dev/install.html> or try `apt-get install python-pandas`.

2.5 iPython

`petlx.ipython.display(tbl, *sliceargs, **kwargs)`
Display a table inline within an iPython notebook. E.g.:

```
In [0]: from petlx.ipython import display
tbl =[['foo', 'bar'], ['a', 1], ['b', 2]]
display(tbl)
```

Alternatively, using the fluent style:

```
In [0]: import petl.interactive as etl
import petlx.ipython
tbl = etl.wrap([['foo', 'bar'], ['a', 1], ['b', 2]])
tbl.display()
```

New in version 0.5.

`petlx.ipython.displayall(tbl, **kwargs)`
Display *all rows* from a table inline within an iPython notebook. E.g.:

```
In [0]: from petlx.ipython import displayall
tbl =[['foo', 'bar'], ['a', 1], ['b', 2]]
displayall(tbl)
```

Alternatively, using the fluent style:

```
In [0]: import petl.interactive as etl
import petlx.ipython
tbl = etl.wrap([['foo', 'bar'], ['a', 1], ['b', 2]])
tbl.displayall()
```

New in version 0.5.

2.6 Intervals (bx-python)

The package bx.intervals is required. Instructions for installation can be found at https://bitbucket.org/james_taylor/bx-python/wiki/Home or try pip install bx-python.

```
petlx.interval.intervaljoin(left, right, lstart='start', lstop='stop', rstart='start', rstop='stop',
                           lfacet=None, rfacet=None, proximity=0)
```

Join two tables by overlapping intervals. E.g.:

```
>>> from petl import look
>>> from petlx.interval import intervaljoin
>>> look(left)
+-----+-----+-----+
| 'begin' | 'end' | 'quux' |
+=====+=====+=====

+-----+-----+-----+
| 4       | 9      | 'baz'   |
+-----+-----+-----+
>>> result = intervaljoin(left, right, lstart='begin', lstop='end', rstart='start', rstop='stop')

New in version 0.2.

```

                                missing=None)
```

Like `intervaljoin()` but rows from the left table without a match in the right table are also included. E.g.:

+-----+-----+-----+-----+-----+-----+
```

New in version 0.2.

```
petlx.interval.intervaljoinvalues(left, right, value, lstart='start', lstop='stop', rstart='start',
                                rstop='stop', lfacet=None, rfacet=None, proximity=0)
```

Convenience function to join the left table with values from a specific field in the right hand table.

New in version 0.5.3.

```
petlx.interval.intervalsubtract(left, right, lstart='start', lstop='stop', rstart='start',
                                rstop='stop', lfacet=None, rfacet=None, proximity=0)
```

Subtract intervals in the right hand table from intervals in the left hand table.

New in version 0.5.4.

```
petlx.interval.intervallookup(table, start='start', stop='stop', value=None, proximity=0)
```

Construct an interval lookup for the given table. E.g.:

```
>>> from petlx.interval import intervallookup
>>> table = [['start', 'stop', 'value'],
...             [1, 4, 'foo'],
...             [3, 7, 'bar'],
...             [4, 9, 'baz']]
>>> lkp = intervallookup(table, 'start', 'stop')
>>> lkp.find(1, 2)
[(1, 4, 'foo')]
>>> lkp.find(2, 4)
[(1, 4, 'foo'), (3, 7, 'bar')]
```

```
>>> lkp.find(2, 5)
[(1, 4, 'foo'), (3, 7, 'bar'), (4, 9, 'baz')]
>>> lkp.find(9, 14)
[]
>>> lkp.find(19, 140)
[]
>>> lkp.find(1)
[]
>>> lkp.find(2)
[(1, 4, 'foo')]
>>> lkp.find(4)
[(3, 7, 'bar')]
>>> lkp.find(5)
[(3, 7, 'bar'), (4, 9, 'baz')]
```

Note that there must be a non-zero overlap between the query and the interval for the interval to be retrieved, hence `lkp.find(1)` returns nothing. Use the `proximity` keyword argument to find intervals within a given distance of the query.

Some examples using the `proximity` and `value` keyword arguments:

```
>>> table = [['start', 'stop', 'value'],
...             [1, 4, 'foo'],
...             [3, 7, 'bar'],
...             [4, 9, 'baz']]
>>> lkp = intervallookup(table, 'start', 'stop', value='value', proximity=1)
>>> lkp.find(1, 2)
['foo']
>>> lkp.find(2, 4)
['foo', 'bar', 'baz']
>>> lkp.find(2, 5)
['foo', 'bar', 'baz']
>>> lkp.find(9, 14)
['baz']
>>> lkp.find(19, 140)
[]
>>> lkp.find(1)
['foo']
>>> lkp.find(2)
['foo']
>>> lkp.find(4)
['foo', 'bar', 'baz']
>>> lkp.find(5)
['bar', 'baz']
>>> lkp.find(9)
['baz']
```

New in version 0.2.

`petlx.interval.intervallookupone`(*table*, *start*=`'start'`, *stop*=`'stop'`, *value*=`None`, *proximity*=0, *strict*=`True`)

Construct an interval lookup for the given table, returning at most one result for each query. If `strict=True` is given, queries returning more than one result will raise a `DuplicateKeyError`. If `strict=False` is given, and there is more than one result, the first result is returned.

See also `intervallookup()`.

2.8 HDF5 (pytables)

The package `pytables` is required. Instructions for installation can be found at <http://pytables.github.com/usersguide/installation.html> or try `apt-get install python-tables`.

`petlx.hdf5.fromhdf5(source, where=None, name=None, condition=None, condvars=None, start=None, stop=None, step=None)`

Provides access to an HDF5 table. E.g.:

```
>>> from petl import look
>>> from petlx.hdf5 import fromhdf5
>>> table1 = fromhdf5('test1.h5', '/testgroup', 'testtable')
>>> look(table1)
+-----+-----+
| 'foo' | 'bar'   |
+=====+=====+
| 1     | 'asdfgh' |
+-----+-----+
| 2     | 'qwerty'  |
+-----+-----+
| 3     | 'zxcvbn'  |
+-----+-----+
```

Some alternative signatures:

```
>>> # just specify path to table node
... table1 = fromhdf5('test1.h5', '/testgroup/testtable')
>>>
>>> # use an existing tables.File object
... import tables
>>> h5file = tables.openFile('test1.h5')
>>> table1 = fromhdf5(h5file, '/testgroup/testtable')
>>>
>>> # use an existing tables.Table object
... h5tbl = h5file.getNode('/testgroup/testtable')
>>> table1 = fromhdf5(h5tbl)
>>>
>>> # use a condition to filter data
... table2 = fromhdf5(h5tbl, condition="(foo < 3)")
>>> look(table2)
+-----+-----+
| 'foo' | 'bar'   |
+=====+=====+
| 1     | 'asdfgh' |
+-----+-----+
| 2     | 'qwerty'  |
+-----+-----+
```

New in version 0.3.

`petlx.hdf5.fromhdf5sorted(source, where=None, name=None, sortby=None, checkCSI=False, start=None, stop=None, step=None)`

Provides access to an HDF5 table, sorted by an indexed column, e.g.:

```
>>> # set up a new hdf5 table to demonstrate with
... import tables
>>> h5file = tables.openFile("test1.h5", mode="w", title="Test file")
>>> h5file.createGroup('/', 'testgroup', 'Test Group')
/testgroup (Group) 'Test Group'
    children := []
>>> class FooBar(tables.IsDescription):
...     foo = tables.Int32Col(pos=0)
...     bar = tables.StringCol(6, pos=2)
...
>>> h5table = h5file.createTable('/testgroup', 'testtable', FooBar, 'Test Table')
```

```
>>>
>>> # load some data into the table
... table1 = (('foo', 'bar'),
...             (3, 'asdfgh'),
...             (2, 'qwerty'),
...             (1, 'zxcvbn'))
>>>
>>> for row in table1[1:]:
...     for i, f in enumerate(table1[0]):
...         h5table.row[f] = row[i]
...     h5table.row.append()
...
>>> h5table.cols.foo.createCSIndex() # CS index is required
0
>>> h5file.flush()
>>> h5file.close()
>>>
>>> # access the data, sorted by the indexed column
... from petl import look
>>> from petlx.hdf5 import fromhdf5sorted
>>> table2 = fromhdf5sorted('test1.h5', '/testgroup', 'testtable', sortby='foo')
>>> look(table2)
+-----+
| 'foo' | 'bar'   |
+=====+=====
| 1     | 'zxcvbn' |
+-----+
| 2     | 'qwerty' |
+-----+
| 3     | 'asdfgh' |
+-----+
```

New in version 0.3.

```
petlx.hdf5.tohdf5(table, source, where=None, name=None, create=False, description=None, title='',
                   filters=None, expectedrows=10000, chunkshape=None, byteorder=None,
                   createparents=False, sample=1000)
```

Write to an HDF5 table. If *create* is *False*, assumes the table already exists, and attempts to truncate it before loading. If *create* is *True*, any existing table is dropped, and a new table is created; if *description* is None, the datatype will be guessed. E.g.:

```
>>> from petl import look
>>> look(table1)
+-----+
| 'foo' | 'bar'   |
+=====+=====
| 1     | 'asdfgh' |
+-----+
| 2     | 'qwerty' |
+-----+
| 3     | 'zxcvbn' |
+-----+
>>> from petlx.hdf5 import tohdf5, fromhdf5
>>> tohdf5(table1, 'test1.h5', '/testgroup', 'testtable', create=True, createparents=True)
>>> look(fromhdf5('test1.h5', '/testgroup', 'testtable'))
+-----+
| 'foo' | 'bar'   |
+=====+=====
```

```
+-----+-----+
| 1    | 'asdfgh' |
+-----+-----+
| 2    | 'qwerty' |
+-----+-----+
| 3    | 'zxcvbn' |
+-----+-----+
```

See also `appendhdf5()`.

+-----+-----+-----+-----+
| '#chrom' | 'start' | 'end'   | 'region'      |
+=====+=====+=====+=====
| 'Pf3D7_02_v3' | '23100' | '105800' | 'SubtelomericHypervariable' |
+-----+-----+-----+-----+
| 'Pf3D7_02_v3' | '105800' | '447300' | 'Core'        |
