
petlx Documentation

Release 0.2

Alistair Miles

March 15, 2013

CONTENTS

`petlx` is a collection of extensions to `petl`, a tentative Python module for extracting, transforming and loading tables of data.

- Documentation: <http://packages.python.org/petlx>
- Source Code: <https://github.com/alimanfoo/petlx>
- Download: <http://pypi.python.org/pypi/petlx>
- Mailing List: <http://groups.google.com/group/python-etl>

For an overview of all functions in the package, see the *genindex*.

INSTALLATION

This module is available from the [Python Package Index](#). On Linux distributions you should be able to do `easy_install petlx` or `pip install petlx`. On Windows or Mac you can download manually, extract and run `python setup.py install`.

MODULES

2.1 Excel files (openpyxl)

2.2 Arrays (numpy)

2.3 Intervals (bx-python)

The package `bx.intervals` is required. Instructions for installation can be found at https://bitbucket.org/james_taylor/bx-python/wiki/Home or try `pip install bx-python`.

2.4 GFF3 Utilities

INDICES AND TABLES

- *genindex*
- *modindex*
- *search*
